

## FELT FILTERS

Dust collector units and felt filters used in liquid filtration are available in all types and sizes. They are available in densities such as 400, 500, 525, 550, 600 gr/m<sup>2</sup>. The filter bag, which is 100% polyester, is internally textured. It is resistant to rupture and tensions. Felt filters, which have a porous structure, keep the particles in the air and ensure the exit of the air in a filtered state.
