

MIST ELIMINATORS

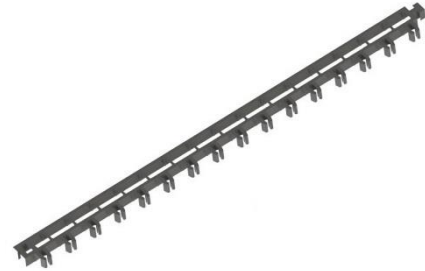

Drip arrester louvers; It is used in air handling units and fresh air inlets in the maritime sector. It prevents the condensed water from being carried indoors and pours the water particles into the drain pan or the foreseen environment with free flow without being carried into the air duct or the device. Drip trap separator blades are fixed with 304 quality stainless steel case.

Seperator Wing

Since it is produced from raw material prepared with a mixture of plastic PP raw material and 20% talc, it does not bend or bend in the face of the heat it encounters. It can be produced in any desired size thanks to special connection nails.

Separator Comb

The separator blade spacings are determined according to the separator comb claws. The drop arrester louvers we manufacture have a pitch of 25 mm; It is manufactured with a dense wing structure. The low wing distance increases the moisture nut yield.
